# Intro to Data Science CS59969

Some Stats

---

Why care about stats?

---

# Stats = Poop Detector

---

Why?

**The first principle is  
that you must not  
fool yourself -  
and you are the  
easiest person to  
fool.**

**- Richard Feynman**

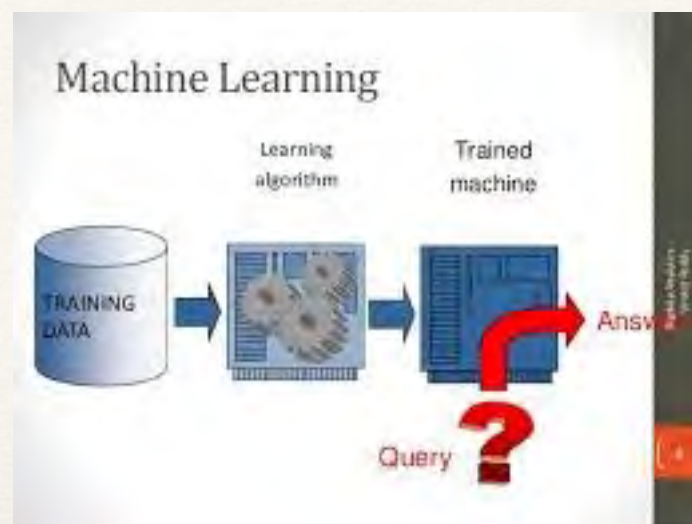

What does this have to do with  
Data Science?

Data

Algorithm

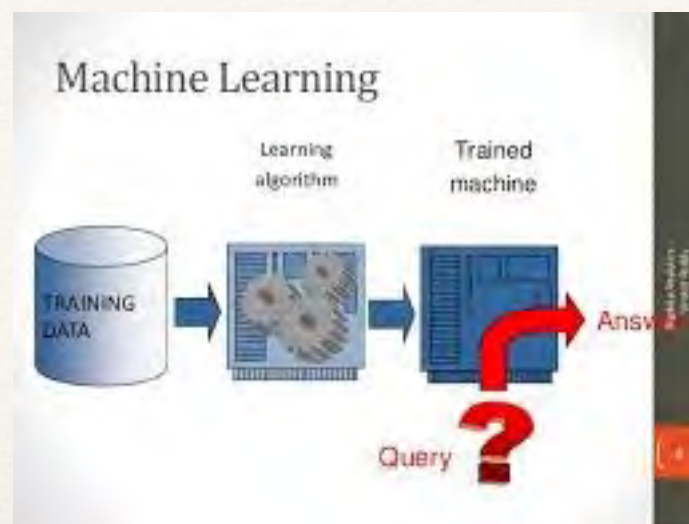

Pattern  
Prediction  
Insight

Or maybe?

How can we be sure?

---

# Can quantify (un)certainty

---

Unlikely  $P(X) < 1 / 36 < 2.7\%$

# Can quantify (un)certainty

Really Unlikely  $P(X) < 1 / 1296 < 0.078\%$

# Can quantify (un)certainty

Nearly Impossible  $P(X) < 1 / 46656 < 0.002\%$

---

# Hypothesis Testing

---

- ❖ Happens by pure chance Null Hypothesis
- ❖ Probably doesn't happen by pure chance if only 5% chance (why 5%? ... or you pick %)

---

# Fair Coin

---

How often does this happen?

---

# Statistics for hackers

---
